

AR1-5 INSTRUCTIONS FOR USE

Thank you for having chosen an LAE electronic product. Before installing the instrument, please read this instruction booklet carefully in order to ensure safe installation and optimum performance.

DESCRIPTION

Fig.1 - Front panel

- Info / Setpoint button.
- Manual defrost / Decrease button.

INDICATIONS

- Thermostat output
- Fan output
- Defrost output
- Activation of 2nd parameter set
- Alarm

- Increase / manual activation button.
- Exit / Stand-by button.

INSTALLATION

- Insert the controller through a hole measuring 71x29 mm.
- Make sure that electrical connections comply with the paragraph "wiring diagrams". To reduce the effects of electromagnetic disturbance, keep the sensor and signal cables well separate from the power wires.
- Fix the controller to the panel by means of the suitable clips, by pressingly gently; if fitted, check that the rubber gasket adheres to the panel perfectly, in order to prevent debris and moisture infiltration to the back of the instrument.
- Place the probe T1 inside the room in a point that truly represents the temperature of the stored product.
- Place the probe T2 on the evaporator where there is the maximum formation of frost.
- The function of probe T3 is determined by the parameter T3. With T3=DSP the probe measures the temperature to be displayed. With T3=CND the probe measures the condenser temperature, it must therefore be placed between the fins of the condensing unit. With T3=2EU the probe measures the temperature of the second evaporator and it must therefore be placed where there is the maximum formation of frost. With T3=NON, the third probe is disabled.

OPERATION

DISPLAY

During normal operation, the display shows either the temperature measured or one of the following indications:

DEF Defrost in progress	HP Condenser high pressure alarm
REC Recovery after defrost	HI Room high temperature alarm
OFF Controller in stand-by	LO Room low temperature alarm
CL Condenser clean warning	E1 Probe T1 failure
DO Door open alarm	E2 Probe T2 failure
HC Condenser high temperature alarm	E3 Probe T3 failure

INFO MENU

The information available in this menu is:

T1 Instant probe 1 temperature	THI Maximum probe 1 temperature recorded
T2* Instant probe 2 temperature	TLO Minimum probe 1 temperature recorded
T3* Instant probe 3 temperature	CND** Compressor working weeks
MIN Minutes of the Real Time Clock	LOC Keypad state lock
HRS Hours of the Real Time Clock.	

*: displayed only if enabled (see §Configuration Parameters) **: displayed only if ACC > 0

Access to menu and information displayed.

- Press and immediately release button (i).
- With button (v) or (a) select the data to be displayed.
- Press button (i) to display value.
- To exit from the menu, press button (x) or wait for 10 seconds.

Reset of THI, TLO, CND recordings

- With button (v) or (a) select the data to be reset.
- Display the value with button (i).
- While keeping button (i) pressed, use button (x).

SETPOINT (display and modification of desired temperature value)

- Press button (i) for at least half second, to display the setpoint value.
- By keeping button (i) pressed, use button (v) or (a) to set the desired value (adjustment is within the minimum SPL and the maximum SPH limit).
- When button (i) is released, the new value is stored.

STAND-BY

Button (s), when pressed for 3 seconds, allows the controller to be put on a standby or output control to be resumed (with SB=YES only).

KEYPAD LOCK

The keypad lock avoids undesired, potentially dangerous operations, which might be attempted when the controller is operating in a public place. In the INFO menu, set parameter LOC=YES to inhibit all functions of the buttons. To resume normal operation of keypad, adjust setting so that LOC=NO.

SELECTION OF SECOND PARAMETER GROUP

It's possible to select control parameters between two different pre-programmed groups, in order for the fundamental control parameters to be adapted quickly to changing needs. Changeover from Group I to Group II (and vice versa) may take place manually by pressing button (M) for 2 seconds (with IISM=MAN), or automatically when heavy duty conditions are detected (with IISM=HDD), or when IISM=DI2 and the auxiliary input DI2 is activated (the activation of DI2 selects Group II). If IISM=NON, switchover to Group II is inhibited. The activation of Group II is signalled by the lighting up of the relevant LED on the controller display.

REAL TIME CLOCK SETTING

The Real Time Clock (RTC) can be adjusted directly from the Info Menu (see Setpoint modification procedure). Tens of minutes MIN range from 0 to 59 and Hours HRS range from 0 to 23. If RTC is adjusted just before an upcoming change of hour, verify the correctness of the setting again. The RTC does not automatically change upon Daylight Saving Time.

DEFROST

Automatic defrost. Defrost starts automatically at fixed time-intervals or at programmed schedules (up to six per 24 hours).

- Timed defrost.** With DFM=TIM defrosts take place at regular intervals when the timer reaches the value of DFT. For example, with DFM=TIM and DFT=06, a defrost will take place every 6 hours.

- Scheduled defrost.** With DFM=RTC defrost takes place at time specified by DH1...DH6. The format of time is "HH.M", where HH are hours and M are tens of minutes. To disable one or more of the 6 scheduled defrosts, assign the value "--" (it is the value after "23.5"). Parameters DH1...DH6 are accessible both in the setup (see §Configuration Parameters) and by keeping button (s) pressed for 4 seconds during normal operation.

Manual or remote defrost start. If DFM=TIM it's possible to manually start a defrost, by pressing button (s) for 4 seconds. If DFM=RTC hold button (s) down for 4 seconds to display DH1, then press button (s) again for 4 seconds to manually start a defrost. Defrost may be also started remotely, if DI2=RDS, through the making of the auxiliary contact DI2.

Defrost type. Once defrost has started, Compressor and Defrost outputs are controlled according to parameter DTY. If FID=YES, the evaporator fans are active during defrost.

Defrost termination. The actual defrost duration is influenced by a series of parameters.

- Time termination:** T2=NO and T3 different from 2EU: the evaporator temperature is not monitored and defrost will last as long as time DTO.
- Temperature monitoring of one evaporator:** T2=YES and T3 different from 2EU. In this case, if the sensor T2 measures the temperature DLI before the time DTO elapses, defrost will be terminated in advance.

Temperature monitoring of two evaporators: T2=YES, T3=2EU, OAU=2EU. This function is for the control of two independent evaporators and it switches off the individual heating of the evaporator which gets to temperature DLI first, waiting for the second evaporator to get to that temperature before the time DTO elapses (see figure).

Resuming thermostatic cycle. When defrost is over, if DRN is greater than 0, all outputs will remain off for DRN minutes, in order for the ice to melt completely and the resulting water to drain. Moreover, if probe T2 is active (T2=YES), the fans will re-start when the evaporator gets to a temperature lower than FDD. Vice versa, if probe T2 is not active (T2=NO) or after defrost has come to an end, such condition does not occur by end of the time FTO, after FTO minutes have elapsed the fans will be switched on anyway.

Caution: if DFM=NON or C-H=HEA all defrost functions are inhibited; if DFT=0, automatic defrost functions are excluded. During a high pressure alarm, defrost is suspended. During defrost, high temperature alarm is bypassed.

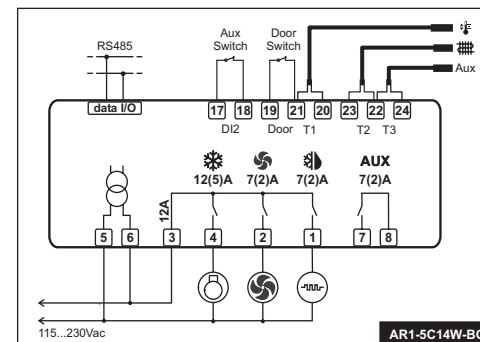

CONFIGURATION PARAMETERS

- To get access to the parameter configuration menu, press button (x) + (i) for 5 seconds.
- With button (v) or (a) select the parameter to be modified.
- Press button (i) to display the value.
- By keeping button (i) pressed, use button (v) or (a) to set the desired value.
- When button (i) is released, the newly programmed value is stored and the following parameter is displayed.
- To exit from the setup, press button (x) or wait for 30 seconds.

PAR	RANGE	DESCRIPTION
SCL	1°C; 2°C; °F	Readout scale. 1°C (with INP=SN4 only): measuring range -50/-9.9 ... 19.9/80°C 2°C : measuring range -50 ... 120°C °F : measuring range -55 ... 240°F <i>Caution: upon changing the SCL value, it is then absolutely necessary to re-configure the parameters relevant to the absolute and relative temperatures (SPL, SPH, SP, ALA, AHA, etc.).</i>
SPL	-50..SPH	Minimum limit for SP setting.
SPH	SPL..120°	Maximum limit for SP setting.
SP	SPL... SPH	Setpoint (value to be maintained in the room).
C-H	REF; HEA	Refrigerating (REF) or Heating (HEA) control mode.
HYS	1...10°	OFF/ON thermostat differential. Refrigerating control (C-H=REF) Heating control (C-H=HEA)
CRT	0...30min	Compressor rest time. The output is switched on again after CRT minutes have elapsed since the previous switchover. We recommend to set CRT=03 with HYS<2.0°.
CT1	0...30min	Thermostat output run when probe T1 is faulty. With CT1=0 the output will always remain OFF.
CT2	0...30min	Thermostat output stop when probe T1 is faulty. With CT2=0 and CT1>0 the output will always be ON. Example: CT1=4, CT2=6: In case of probe T1 failure, the compressor will cycle 4 minutes ON and 6 minutes OFF.
CSD	0..30min	Compressor stop delay after the door has been opened (active only if DS=YES).
2CD	0...120sec	Auxiliary compressor start delay. If OAU = 2CU the auxiliary output is switched on with a delay of 2CD seconds after the main compressor has cut-in. Both compressors are turned off at the same time.
DFM	NON; TIM; RTC	Defrost start mode NON : defrost function is disabled (the following parameter will be FID). TIM : regular time defrost. RTC : the defrost time is scheduled by parameters DH1, DH2...DH6.
DFT	0...99 hours	Time interval among defrosts. When this time has elapsed since the last defrost, a new defrost cycle is started.
DH1	HH.M	Scheduled time for defrost 1. HH hours from midnight, M tens of minutes. Accepted values go from 00.0 to 23.5. After "23.5" the value is "--" that means "skipped defrost". Example: DH1=8.3 means 8.30 AM
DH2	HH.M	Scheduled time for defrost 2
DH3	HH.M	Scheduled time for defrost 3
DH4	HH.M	Scheduled time for defrost 4
DH5	HH.M	Scheduled time for defrost 5
DH6	HH.M	Scheduled time for defrost 6
DLI	-50...120°	Defrost end temperature.
DTO	1...120min	Maximum defrost duration.
DTY	OFF; ELE; GAS	Defrost type OFF: off cycle defrost (Compressor and Heater OFF). ELE: electric defrost (Compressor OFF and Heater ON). GAS: hot gas defrost (Compressor and Heater ON).
DRN	0...30min	Pause after defrost (evaporator drain down time).
DDY	0...60min	Display during defrost. If DDY=0 during defrost the temperature continues to be displayed. If DDY>0, during defrost the display shows DEF, when defrost is over REC is displayed during DDY minutes.
FID	NO/YES	Fans active during defrost.
FDD	-50...120°	Evaporator fan re-start temperature after defrost.
FTO	0...120min	Maximum evaporator fan stop after defrost.
FTC	NO/YES	Optimised fan control enabling. With FTC = NO the fans remain on all the time. Fig.2 Optimised fan control (FTC=YES)
FT1	0...180sec	Fan stop delay after compressor stop. See Fig. 2.
FT2	0...30min	Timed fan stop. With FT2=0 the fans remain on all the time.
FT3	0...30min	Timed fan run. With FT3=0, and FT2 > 0, the fans remain off all the time.

ATM	NON; ABS; REL	Alarm threshold management. NON: all temperature alarms are inhibited (the following parameter will be ADO). ABS: the values programmed in ALA and AHA represent the real alarm thresholds. REL: the values programmed in ALR and AHR are alarm differentials referred to SP and SP+HYS. Temperature alarm with relative thresholds, refrigerating control (ATM=REL, C-H=REF). Temperature alarm with relative thresholds, heating control (ATM=REL, C-H=HEA).
ALA	-50... 120°	Low temperature alarm threshold.
AHA	-50... 120°	High temperature alarm threshold.
ALR	-12... 0°	Low temperature alarm differential. With ALR=0 the low temperature alarm is excluded.
AHR	0... 12°	High temperature alarm differential. With AHR=0 the high temperature alarm is excluded.
ATI	T1; T2; T3	Probe used for temperature alarm detection.
ATD	0... 120min	Delay before alarm temperature warning.
ADO	0... 30min	Delay before door open alarm warning.
AHM	NON; ALR; STP;	Operation in case of high condenser alarm NON: high condenser alarm inhibited. ALR: in case of alarm, "HC" flashes in the display and the buzzer is switched on. STP: in addition to the alarm symbols displayed, the compressor is stopped and defrosts are suspended.
AHT	-50...120°	Condensation temperature alarm (referred to T3 probe).
ACC	0...52 weeks	Condenser periodic cleaning. When the compressor operation time, expressed in weeks, matches the ACC value programmed, "CL" flashes in the display. With ACC=0 the condenser cleaning warning is disabled and CND disappears from Info Menu.
HDS	1...5	Controller sensitivity for the automatic switchover from Group 1 to Group 2 (1=minimum, 5=maximum).
IISM	NON; MAN; HDD; DI2	Switchover mode to second parameter set NON: inhibition to use the second parameter group (the following parameter will be SB). MAN: button (M) switches the two parameter groups over. HDD: automatic switchover to the second parameter group, when heavy duty conditions are detected. DI2: switchover to the second parameter group when the auxiliary DI2 input makes.
IISL	-50... IISH	Minimum limit for IISP setting.
IISH	IISL... 120°	Maximum limit for IISP setting.
IISP	IISL... IISH	Setpoint in mode 2.
IIHY	1... 10°	OFF/ON differential in mode 2.
IIFT	NO/YES	Optimised fan control enabling in mode 2.
IIDF	0...99 hours	Defrost timer set to start a defrost in mode 2.
SB	NO/YES	Stand-by button (s) enabling.
DS	NO/YES	Door switch input enabling (closed when door is closed).
DI2	NON; HPS; IISM; RDS	DI2 digital input operation NON : digital input 2 not active. HPS: when contact opens a condensing unit high pressure alarm occurs. IISM : when contact makes the controller will use group 2 parameters. RDS : when contact makes a defrost is started (remote control).
LSM	NON; MAN; DOR	Light control mode NON : light output not controlled. MAN : light output controlled through button (M) (if OAU=LG). DOR : light output switched on when door is opened (if OAU=LG).
OAU	NON; 0-1; LG1; 2CU; 2EU; AL0; AL1	AUX output operation NON : output disabled (always off). 0-1 : the relay contacts follow the on/standby state of controller. LG1 : output enabled for light control. 2CU : output programmed for the control of an auxiliary compressor. 2EU : output enabled for the control of the electrical defrost of a second evaporator. AL0 : contacts open when an alarm condition occurs. AL1 : contacts make when an alarm condition occurs.
INP	SN4; ST1	Temperature sensor selection. With INP = SN4, the probes must be the LAE models SN4.; with INP = ST1, the probes must be the LAE models ST1...
OS1	-12.5..12.5°C	Probe T1 offset.
T2	NO/YES	Probe T2 enabling (evaporator).
OS2	-12.5..12.5°C	Probe T2 offset.
T3	NON; DSP; CND; 2EU	Auxiliary probe T3 operation NON: probe T3 not fitted. DSP: temperature T3 to be displayed. CND: condenser temperature measurement. 2EU: second evaporator temperature measurement.
OS3	-12.5..12.5°C	Probe 3 offset.
TLD	1...30 min	Delay for minimum temperature (TLO) and maximum temperature (THI) logging.
SIM	0...100	Display slowdown.
ADR	1...255	AR1-5 address for PC communication.

AR1-5 ISTRUZIONI D'USO

Vi ringraziamo per la preferenza accordata scegliendo un prodotto LAE electronic. Prima di procedere all'installazione dello strumento, leggete attentamente il presente foglio d'istruzioni: solo così potrete ottenere massime prestazioni e sicurezza.

DESCRIZIONE

Fig. 1 - Pannello frontale

- Tasto Info / Setpoint.
Tasto sbrinamento manuale / decremento.

INDICAZIONI

- Uscita termostatazione
Uscita ventole
Uscita sbrinamento
Attivazione 2° set di parametri
Allarme
Tasto incremento / modalità manuale.
Tasto uscita / Stand-by.

INSTALLAZIONE

- Inserire lo strumento in un foro di dimensioni 71x29 mm;
Eseguire i collegamenti elettrici facendo riferimento al paragrafo "schemi di collegamento".
Fissare lo strumento al pannello mediante le apposite staffette...
Posizionare la sonda T1 in un punto della cella che ben rappresenti la temperatura del prodotto da conservare.
Posizionare la sonda T2 sull'evaporatore nel punto di maggior formazione di brina.
La funzione della sonda T3 è determinata dal parametro T3.

FUNZIONAMENTO

VISUALIZZAZIONI
In funzionamento normale sul display viene visualizzata la temperatura rilevata oppure una delle indicazioni seguenti:

Table with 2 columns: Parameter (DEF, REC, OFF, CL, DO, HC) and Description (Sbrinamento in corso, Ristabilimento dopo uno sbrinamento, Strumento in stand-by, etc.)

MENU INFO

Table with 2 columns: Parameter (T1, T2*, T3*, MIN, HRS, THI, TLO, CND**, LOC) and Description (Temperatura istantanea sonda 1, Temperatura massima registrata sonda 1, etc.)

*: visualizzate solo se abilitate (vedere § Parametri di Configurazione) **: visualizzate solo se ACC > 0

Accesso ai menù e visualizzazione informazioni.

- Premere e subito rilasciare il tasto I.
Con i tasti V o A selezionare il dato da visualizzare.
Premere il tasto I per visualizzare il valore.
Per uscire dal menù, premere il tasto X o attendere 10 secondi.

Reset delle memorizzazioni THI, TLO, CND

- Con i tasti V o A selezionare il dato da resettare.
Visualizzare il valore con il tasto I.

SETPOINT (visualizzazione e modifica valore di temperatura desiderato)

- Premere per almeno mezzo secondo il tasto S per visualizzare il valore del setpoint.
Mantenendo premuto S agire con i tasti V o A per impostare il valore desiderato (la regolazione è compresa entro il limite minimo SPL e massimo SPH).
Al rilascio del tasto S il nuovo valore viene memorizzato.

STAND-BY

Il tasto S, premuto per 3 secondi, consente di commutare lo stato del regolatore fra operatività delle uscite e standby (solo con SB=YES).

BLOCCO DELLA TASTIERA

Il blocco dei tasti impedisce operazioni indesiderate, potenzialmente dannose, che possono avvenire qualora il regolatore operi in ambiente pubblico. Per inibire tutti i comandi da tastiera impostare LOC=YES nel menù INFO; per ripristinare la normale funzionalità riprogrammare LOC=NO.

SELEZIONE SECONDO GRUPPO DI PARAMETRI

È possibile selezionare i parametri di regolazione fra due diversi gruppi pre-programmati, per adattare in pochi istanti i parametri fondamentali del regolatore alle diverse esigenze. Il passaggio dal Gruppo I al Gruppo II (e viceversa) può avvenire manualmente premendo per 2 secondi il tasto M (con IISM=MAN), o automaticamente al rilevamento di condizioni di utilizzo severe (con IISM=HDD), o quando IISM=DI2 e viene chiuso l'ingresso ausiliario DI2 (l'attivazione seleziona il Gruppo II). Se IISM=NON, il passaggio al Gruppo II è interdetto.

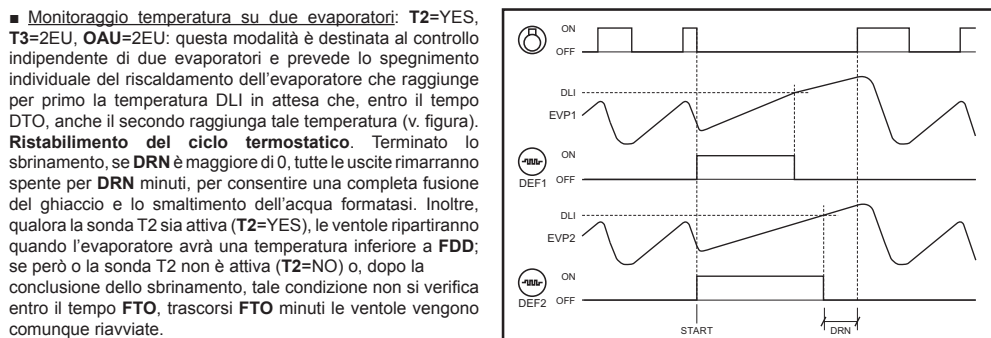

IMPOSTAZIONE OROLOGIO A TEMPO REALE

L'Orologio a Tempo Reale (RTC) può essere impostato direttamente dal Menu Info (vedere procedura per la modifica del setpoint). Il campo di regolazione dei minuti MIN va da 0 a 59 e il campo di regolazione delle ore HRS va da 0 a 23. Se l'RTC viene programmato poco prima del cambio dell'ora, rivedificare la correttezza dell'impostazione. L'RTC non esegue automaticamente il cambio tra l'Ora Legale e l'Ora Solare.

SBRINAMENTO

Sbrinamento automatico. Lo sbrinamento inizia automaticamente ad intervalli fissi o ad orari programmati (fino a sei nelle 24 ore).
Sbrinamento temporizzato. Con DFM=TIM l'incremento del timer è continuo e gli sbrinamenti avvengono ad intervalli regolari.
Sbrinamenti ad orario. Con DFM=RTC lo sbrinamento avviene agli orari programmati con i parametri DH1...DH6.
Sbrinamento manuale o start remoto. Se DFM=TIM, è possibile avviare uno sbrinamento manualmente tenendo premuto il tasto S per 4 secondi.
Tipo di sbrinamento. Iniziatore uno sbrinamento, le uscite Compressore e Sbrinamento sono comandate in conformità al parametro DTY.
Termine dello sbrinamento. La durata effettiva dello sbrinamento è influenzata da una serie di parametri.

- Terminazione a tempo: T2=NO e T3 diverso da 2EU: la temperatura dell'evaporatore non viene monitorata e lo sbrinamento avrà sempre durata pari al tempo DTO.
Monitoraggio temperatura su un evaporatore: T2=YES e T3 diverso da 2EU: qualora la sonda T2 raggiunga la temperatura DLI entro il tempo DTO, lo sbrinamento avrà una conclusione anticipata.

Attenzione: se DFM=NON o C-H=HEA tutte le funzioni di sbrinamento sono inibite; se DFT=0 vengono escluse le funzioni di sbrinamento automatico; durante un allarme di Alta Pressione lo sbrinamento è sospeso; durante uno sbrinamento l'allarme d'alta temperatura è sospeso.

PARAMETRI DI CONFIGURAZIONE

- Per accedere al menù di configurazione dei parametri, premere per 5 secondi i tasti X + I.
Con i tasti V o A selezionare il parametro da modificare.
Premere il tasto I per visualizzare il valore.
Mantenendo premuto I agire con i tasti V o A per impostare il valore desiderato.
Al rilascio del tasto I il nuovo valore viene memorizzato e viene visualizzato il parametro successivo.
Per uscire dal setup premere il tasto X o attendere 30 secondi.

Parameter configuration table with columns: PAR, RANGE, DESCRIZIONE. Includes parameters like SCL, SPL, SPH, SP, C-H, HYS, CRT, CT1, CT2, CSD, 2CD, DFM, DFT, DH1-DH6, DLI, DTO, DTY, DRN, DDY, FID, FDD, FTO, FTC, FT1, FT2.

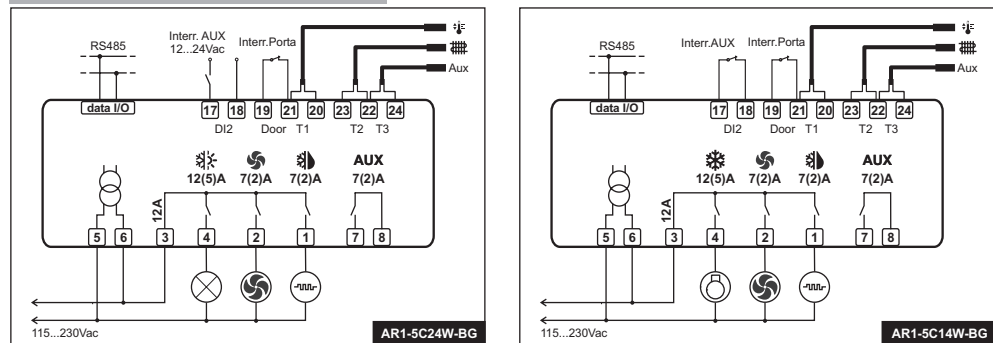

Fig.2 Controllo ottimizzato ventole (FTC=YES)

Functional parameters table with columns: Parameter, Range, Description. Includes FT3, ATM, ALA, AHA, ALR, AHR, ATI, ATD, ADO, AHM, AHT, ACC, HDS, IISM, IISL, IISH, IISP, IIHY, IIFT, IIDF, SB, DS, DI2, LSM, OAU, INP, OS1, T2, OS2, T3, OS3, TLD, SIM, ADR.
